

Architectural Resources

Folding Panel Partitions & Movable Interior Glass Systems

Design Assistance & Planning

We support architects early in the design process by assisting with system selection, preliminary budgeting, and code awareness. Design-assist collaboration helps align performance, flexibility, and aesthetics while identifying constraints before documents are finalized. Our partition experts condense recommendations into a concise *Design Study* to share with your clients on new or renovation projects.

Technical Documentation & Digital Tools

We provide CSI 3-part guide spec, basis-of-design language, performance data, and standard details to support clear documents. BIM flex families and dynamic CAD details are non-gated assets that improve coordination 24/7.

Finishes, Mockups & Performance Validation

Design teams are supported with finish samples, custom material flexibility, and durability guidance. Physical or digital mockups, acoustic testing, and 3D visuals help validate design, manage expectations, and support client approvals.

Engineering, Coordination & Construction Support

We offer technical feedback for structural support, acoustics, storage pocket dimensioning, and system movement. Our corporate design team can assist from early schematic to shop drawing submittals, RFI responses, installation sequencing, and coordination with related or surrounding trades. Our BIM experts also provide skilled interaction with your project models across multiple platforms to ensure smooth project delivery.

Sustainability & Professional Education

We provide EPD & IAQ documentation that supports LEED requirements and other certification efforts. We provide IDCEC & AIA-approved CEUs, product capabilities, and technical education focused on best practices and emerging trends in movable partitions.

What you get when you work with Kwik-Wall

A trusted manufacturer with over 65 years of experience, represented nationwide. Kwik-Wall delivers industry-leading service—fast lead times, responsive customer support, and the premier online configurator, **Partition Studio® 5**. Our solutions are backed by certified installers, dedicated partition designers, and in-house acoustic engineering and testing to ensure performance you can rely on. Our experts are versed in the project delivery you can count on.
